Project: Redistricting/Gerrymandering

Voting rights have come under fire. **To protect these rights**, we need to understand the basic concept of how voters are districted, and how "minority rule" districts have come into existence.

Just over half of the Senate represents **41,549,808** more people than than the other half. The **majority control of the Supreme Court was appointed by** a portion of the Senate that represented **less than half of the population**.

Project Scope*:
We're going to **code up a simulation** of voters and district them and find the ideal. Then "gerrymander" the voting districts to see how that affects voting.

*Note: this is a program *heavy* project.
