Masked-Angst

Goal:

Find datasets correlating with COVID and mental health, find code to use for data visualization and analysis, and set up GitHub repository.

handled

- Found **3 datasets**, domestic and 2 international domains. Correlates with depression and anxiety. **Post-surveys** done yearly with COVID, **COVID impact survey**.
- Found datasets for medical data of **drug purchases, suicide hotlines, overdose, alcohol uses** and other signs of depression and mental health including **Spotify** searches and **Google** searches.
- Set up a **GitHub repository** and gave us access, adding the **ReadMe** file, and the **images** were deposited.
- Found code for data **visualization** for mental health datasets.

toHandle

1. Clean the data to prepare for visualization step

2. Incorporate dataset into code to populate the visualization of the data
